

STUDY TOUR 2019 at

May 28th 2019

Janssen Pharmaceutica NV

Project LION, which stands for “Labs-in-One-Network”, is an important new investment of 42.8 million euro on the Janssen Pharmaceutica Beerse campus in Belgium. The ambitious project is in its final construction phase and will consolidate all Small Molecule Pharmaceutical Development staff, resources and activities currently dispersed across four buildings. Also, LION will be one of the first buildings in Johnson & Johnson designed to use the new ‘J&J Lab Experience Concept’, allowing to swiftly move from lab to office and vice versa, and will be used as a prototype for all new labs in the J&J network. With a primary focus on Sustainability, the building will become the greenest on campus through the generation of considerable energy and water efficiency gains and the rationalized use of resources & materials. Some of the major EGNATON protagonists put knowledge, gained in our work, into practice with this project.
